Important note:

Unless otherwise indicated, this policy will apply to all lines of business.

Even though this policy may indicate that a particular service or supply may be considered medically necessary and thus covered, this conclusion is not based upon the terms of your particular benefit plan. Each benefit plan contains its own specific provisions for coverage and exclusions. Not all benefits that are determined to be medically necessary will be covered benefits under the terms of your benefit plan. You need to consult the Evidence of Coverage (EOC) or Summary Plan Description (SPD) to determine if there are any exclusions or other benefit limitations applicable to this service or supply. If there is a discrepancy between this policy and your plan of benefits, the provisions of your benefits plan will govern. However, applicable state mandates will take precedence with respect to fully insured plans and self-funded non-ERISA (e.g., government, school boards, church) plans. Unless otherwise specifically excluded, Federal mandates will apply to all plans. With respect to Medicare-linked plan members, this policy will apply unless there are Medicare policies that provide differing coverage rules, in which case Medicare coverage rules supersede guidelines in this policy. Medicare-linked plan policies will only apply to benefits paid for under Medicare rules, and not to any other health benefit plan benefits. CMS's Coverage Issues Manual can be found on the CMS website. Similarly, for Medicaid-linked plans, the Texas Medicaid Provider Procedures Manual (TMPPM) supersedes coverage guidelines in this policy where applicable.

The person manifests with the desire to live as a member of the opposite sex and progressively take steps to live in the opposite sex role full-time." Treatment in general, including surgical treatment, aims to help reduce or remove the distressing feelings of a mismatch between biological sex and gender identity.

Gender reassignment surgery, also known as transsexual surgery, sex reassignment surgery or intersex surgery, is the culmination of a series of procedures designed to change the anatomy to conform to the gender to which a person with a gender identity disorder identifies themselves. Gender reassignment surgery entails castration, penectomy and vulva-vaginal construction for male to female gender reassignment. Female to male surgery includes bilateral mammectomy, hysterectomy, salpingo-oophorectomy, followed by phalloplasty and insertion of testicular prosthesis.
